

Sustainability Commitment

ABACORP is committed to responsible manufacturing practices that support long-term environmental sustainability while maintaining the quality, consistency, and performance our customers expect.

Energy Efficiency

Our facility utilizes solar power to help reduce overall energy consumption and reliance on traditional power sources.

Low Scrap, High Process Control

Through strong process planning, preventative quality measures, and continuous improvement, we maintain an exceptionally low scrap rate. This reduces material waste and supports efficient production across all machining operations.

Recycling & Waste Reduction

We actively support recycling initiatives throughout our facility and prioritize the use of recyclable materials and packaging whenever feasible.

Continuous Improvement

Sustainability is part of our operational mindset. We continually evaluate our processes to identify opportunities for improved efficiency, reduced waste, and responsible resource use.

ABACORP remains focused on delivering precision CNC machined parts while operating with a high level of environmental responsibility.
